Retransmission Software  
Release Notes V3.6

---

**Version 3.6 released 5-7-2010**

## **WxBBsrvr**

1. Changed the serial baud reporting routine to default to 9600 baud. It was defaulting to 1200 baud.
2. Corrected the registry path used to determine the serial baud rate used by WxEmwin.
3. Disabled Nagle algorithm for testing.
4. The Setup window now has two tabs, settings and options.
5. Added the reporting baud to the settings tab.
6. Change the way that the program determines the reporting baud.
7. Added a registry key to override the reporting baud.
8. The program will now report the actual serial port baud rate or 19200 if the software demodulator is selected.

## **WxRetran**

1. Added the ability to run the program in the task bar.
