Weather Message Retransmission

Release Notes V3.9

Version 3.9 released 8/26/2012

WxBBSrvr

1. Corrected an issue that caused the program to continue to ask for the server's location.
2. Added additional code to verify the fixed ip address.
3. Added additional code to verify the public ip address returned by the host master. If we get an incomplete address, the program will change the ip address to 192.192.192.192 and highlight the server field in light red.
4. Now defaults to port 2211, the IANA assigned port.

WxRetran

1. No longer sends "Transmit Timeout" out the serial port when the transmitter times out.
